Episode of care—additional diagnosis

Identifying and definitional attributes

Metadata item type: Data Element Concept

METEOR identifier: 269656

Registration status: <u>Health</u>, Superseded 05/02/2008

Definition: A condition or complaint either coexisting with the principal diagnosis or arising

during the episode of admitted patient care, episode of residential care or

attendance at a health care establishment.

Context: Additional diagnoses give information on factors which result in increased length of

stay, more intensive treatment or the use of greater resources. They are used for casemix analyses relating to severity of illness and for correct classification of patients into Australian Refined Diagnosis Related Groups (AR-DRGs).

Object Class attributes

Identifying and definitional attributes
