## **Object Class attributes**

## Identifying and definitional attributes

Object class: Household

**Definition:** A group of two or more related or unrelated people who usually reside in the same

dwelling, and who make common provision for food or other essentials for living; or a single person living in a dwelling who makes provision for his or her own food and

other essentials for living, without combining with any other person.

Context: Together with family, household is considered one of the basic groups of social

> aggregation. Information on household numbers and composition aids in identifying groups within the population such as Indigenous households or the number of

people living alone.

Specialisation of: Person/group of persons

## Collection and usage attributes

Guide for use: For housing data collections, the number of tenancy agreements is a practical

proxy for calculating the number of households receiving housing assistance.

The persons in the group may pool their incomes and have a common budget to a greater or lesser extent: they may be related or unrelated persons, or a combination

of both.

Only usual residents of the household are included as members of the household.

Visitors to a household are, by definition, excluded from the household.
