

NMDS - Elective surgery waiting times

Important note: This is an archived metadata standard from the AIHW Knowledgebase. For current metadata standards and related information please access METeOR, the AIHW's Metadata Online Registry at <http://meteor.aihw.gov.au>

Start date: 01-JUL-94

End date:

Scope: The scope of this minimum data set is patients on, or removed from waiting lists for elective surgery (as defined in the Waiting list category data element) which are managed by public acute hospitals. This will include private patients treated in public hospitals, and may include public patients treated in private hospitals.

Hospitals may also collect information for other care (as defined in the Waiting list category data element), but this is not part of the NMDS for elective surgery waiting times.

Patients on or removed from waiting lists managed by hospitals operated by the Australian Defence Force, corrections authorities and Australia's external Territories are not currently included.

There are two different types of data collected for this minimum data set (census data and removals data) and the scope and list of data elements associated with each is different.

Census data: Data are collected for patients on elective surgery waiting lists who are yet to be admitted to hospital or removed for another reason. The scope is patients on elective surgery waiting lists on a census date who are 'ready for care' as defined in the 'patient listing status' data element.

Removals data: Data are collected for patients who have been removed from an elective surgery waiting list (for admission or another reason). Patients who were 'ready for care' and patients who were 'not ready for care' at the time of removal are included.

Statistical units: Patients on waiting lists on census dates; patients removed from waiting lists (for admission or other reason) during each financial year.

Collection methodology: Category reassignment date is not required for reporting to the NMDS, but is necessary for the derivation of Waiting time at census date and Waiting time at removal from elective surgery waiting list. Waiting list

category and Patient listing status are not required for reporting to the NMDS, but are necessary for determining whether patients are in scope for the NMDS. These data elements should be collected at the local level and reported to State and Territory health authorities as required.

National reporting arrangements:

State and Territory health authorities provide the data to the Australian Institute of Health and Welfare for national collation, on an annual basis.

Periods for which data are collected and nationally collated:
Financial years ending 30 June each year for removals data. Census dates are 30 September, 31 December, 31 March and 30 June

Source organisation: National Health Information Management Group

Comments: For the purposes of this NMDS, public hospitals include hospitals which are set up to provide services for public patients (as public hospitals do), but which are managed privately.

Category reassignment date is not required for reporting to the NMDS, but is necessary for the derivation of Waiting time at census date and Waiting time at removal from elective surgery waiting list. Waiting list category and Patient listing status are not required for reporting to the NMDS, but are necessary for determining whether patients are in scope for the NMDS. These data elements should be collected at the local level and reported to State and Territory health authorities as required.

The inclusion of public patients on or removed from elective surgery waiting lists managed by private hospitals will be investigated in the future.

Statistical units are entities from or about which statistics are collected or in respect of which statistics are compiled, tabulated or published.
