# Person (address)—postal delivery point identifier, {N(8)}

# Identifying and definitional attributes

Metadata item type: Data Element

**Short name:** Postal delivery point identifier (person)

**Synonymous names:** Australian delivery point identifier

METEOR identifier: 287220

Registration status: Community Services (retired), Superseded 06/02/2012

Health, Superseded 05/10/2016

**Definition:** A unique number assigned to a person's postal address as recorded on the

Australia Post Postal Address File (PAF).

Data Element Concept: Person (address)—postal delivery point identifier

**Value Domain:** Postal delivery point identifier {N(8)}

## Value domain attributes

# Representational attributes

Representation class: Identifier

Data type: Number

Format: {N(8)}

Maximum character length: 8

#### Data element attributes

# Collection and usage attributes

Guide for use: Australia Post maintains a Postal Address File (PAF) database which contains

Australian postal delivery addresses and their corresponding eight (8) character unique identification number known as a Delivery Point Identifier (DPID). While the PAF is concerned with postal address, for many persons' a postal address will be the same as their residential address. The PAF can be used to improve the

recording of address data at the time of data collection.

The Postal Address File may be used at the time of data collection to confirm that the combined metadata items of address line, suburb/town/locality, Australian state/territory identifier and postcode - Australian are accurately recorded.

**Collection methods:** The Delivery Point Identifier (DPID) is assigned electronically to recognised

Australia Post delivery addresses following reference to the Postal Address File

(PAF) database.

Comments: In October 1999, Australia Post introduced a bar-coding system for bulk mail

lodgements. Agencies or establishments can use software to improve the quality of person address data it collects and records and, at the same time, receive financial

benefits by reducing its postage expenses.

The DPID is easily converted to a bar code and can be included on

correspondence and address labels. If the bar code is displayed on a standard envelope that passes through a mail-franking machine (e.g. as used by most major hospitals), the postage cost is reduced. Every three months, Australia Post provides updates to the PAF database. For more information, contact Australia
