Person—acute coronary syndrome related medical history, code NN

Exported from METEOR (AIHW's Metadata Online Registry)

Person—acute coronary syndrome related medical history, code NN

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Acute coronary syndrome related medical history
METEOR identifier:	356598
Registration status:	Health, Standard 01/10/2008
Definition:	A person's history of acute coronary syndrome related medical conditions as represented by a code.
Data Element Concept:	Person—acute coronary syndrome related medical history
Value Domain:	Acute coronary syndrome related medical history code NN

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	NN	
Maximum character length:	2	
	Value	**Meaning**
Permissible values:	11	Angina (excluding unstable angina): prior existing
	12	Angina (excluding unstable angina): new onset
	13	Unstable angina
	21	Chronic lung disease
	31	Heart failure
	41	Hypertension
	51	Ischaemic: non-haemorrhagic cerebral infarction
	52	Haemorrhagic: intracerebral haemorrhage
	61	Peripheral artery disease
	62	Aortic aneurysm
	63	Renal artery stenosis
	71	Sleep apnoea
	81	Previous myocardial infarction
	91	Atrial fibrillation
	92	Other dysrhythmia or conductive disorder
	93	Left ventricular hypertrophy
Supplementary values:	99	Not stated/inadequately described

Collection and usage attributes

Guide for use:	Angina:
	CODE 11 Angina (excluding unstable angina): prior existing

This code is used where there are symptoms, which can be described as chest pain or pain in either or both shoulders, the back, neck or jaw, or other equivalent discomfort (such as tightness, gripping or squeezing) suggestive of cardiac ischaemia, the onset of which occured more than two weeks ago.

CODE 12   Angina (excluding unstable angina): new onset

This code is used where there are symptoms which can be described as chest pain or pain in either or both shoulders, the back, neck or jaw, or other equivalent discomfort (such as tightness, gripping or squeezing) suggestive of cardiac ischaemia; the onset of which occured two or less weeks ago.

CODE 13   Unstable angina

This code is used where a person has experienced new onset or prior existing angina (described as chest pain or pain in either or both shoulders, the back, neck or jaw, or other equivalent discomfort (such as tightness, gripping or squeezing)), which is increasing in severity, duration or frequency.

Chronic lung disease:

CODE 21   Chronic lung disease

This code is used where there is a history or symptoms suggestive of chronic lung disease.

Heart failure:

CODE 31   Heart failure

This code is used where a person has past or current symptoms of heart failure (typically breathlessness or fatigue), either at rest or during physical activity and/or signs of pulmonary or peripheral congestion suggestive of cardiac dysfunction.

Hypertension:

CODE 41   Hypertension

This code is used where there is current use of pharmacotherapy for hypertension and/or clinical evidence of high blood pressure.

CODE 51   Ischaemic: non-haemorrhagic cerebral infarction

This code is used if there is history of stroke or cerebrovascular accident (CVA) resulting from an ischaemic event where the patient suffered a loss of neurological function with residual symptoms remaining for at least 24 hours.

CODE 52   Haemorrhagic: intracerebral haemorrhage

This code is used if there is history of stroke or cerebrovascular accident (CVA) resulting from a haemorrhagic event where the patient suffered a loss of neurological function with residual symptoms remaining for at least 24 hours.

Peripheral arterial disease:

CODE 61   Peripheral artery disease

This code is used where there is history of either chronic or acute occlusion or narrowing of the arterial lumen in the aorta or extremities.

CODE 62   Aortic aneurysm

This code is used where there is a history of aneurysmal dilatation of the aorta (thoracic and or abdominal).

CODE 63   Renal artery stenosis

This code is used where there is a history of functional stenosis of one or both renal arteries.

Sleep apnoea syndrome:

CODE 71   Sleep apnoea

This code is used where there is evidence of sleep apnoea syndrome (SAS) on history.

Myocardial infarction:

CODE 81   Previous myocardial infarction

This code is used where a person has previously experienced a myocardial infarction, excluding the current event that prompted this presentation to hospital. This may be supported by clinical documentation and evidenced by ECG changes or serum cardiac biomarker changes.

Other vascular conditions:

CODE 91   Atrial fibrillation

This code is used where there is a history or symptoms suggestive of atrial fibrillation.

CODE 92   Other cardiac arrhythmias or conductive disorders

This code is used where there is a history of other cardiac arrhythmias or conductive disorders.

CODE 93   Left ventricular hypertrophy

This code is used where there is a history or symptoms suggestive of left ventricular hypertrophy.

Data element attributes

Collection and usage attributes

Guide for use: More than one medical condition may be recorded.

Record only those codes that apply.

Record all codes that apply.

Collection methods: Where codes 21, 31, 51, 52, 61, 62, 63, 71, 91, 92 and 93 are recorded Person - clinical evidence status (acute coronary syndrome related medical conditions), yes/no code N must also be recorded.

Comments: A history of the listed medical conditions is pertinent to the risk stratification and treatment of acute coronary syndrome.
