National Healthcare Agreement: P01-Proportion of babies born with low birth weight, 2010

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	Proportion of babies born with low birth weight, 2010
METEOR identifier:	392491
Registration status:	Health , Superseded 08/06/2011
Description:	The incidence of low birthweight among liveborn singleton babies, as a proportion of liveborn singleton babies.
Indicator set:	National Healthcare Agreement (2010) Health , Superseded 08/06/2011
Outcome area:	Prevention Health , Standard 07/07/2010
Data quality statement:	National Healthcare Agreement: P01-Proportion of babies born with low birth weight, 2010 QS Health , Superseded 08/06/2011

Collection and usage attributes

Computation description:	Population is newborn babies. Excludes babies from multiple births, stillborn babies and babies with unknown birthweight.
Computation:	$100 \times (\text{Numerator} \div \text{Denominator})$
Numerator:	Number of low birthweight liveborn singleton babies born in the 2007 calendar year. Low birthweight is defined as less than 2,500 grams at birth.

Used for disaggregation by state/territory, remoteness area and SEIFA of residence

Comments:

Specified disaggregation: State/territory of usual residence: By maternal Indigenous status; Nationally: By remoteness area and SEIFA of residence of the mother.

Available disaggregation: State/territory of usual residence: By maternal Indigenous status; Nationally: By remoteness area and SEIFA of residence of the mother.

Data for 2008 will be available in October 2010.

Most recent data available for 2010 CRC baseline report: 2007 (calendar year data).

This indicator is calculated using data from the AIHW National Perinatal Data Collection (NPDC).

For data by socioeconomic status: calculated by AIHW using the ABS' Index of Relative Socioeconomic Disadvantage and ERP by Statistical Local Area (SLA) as at 30 June 2007. Each SLA in Australia is ranked and divided into quintiles in a population-based manner, such that each quintile has approximately 20% of the 'women who gave birth' population.

For data by remoteness area: NPDC data, by remoteness areas, as specified in the Australian Standard Geographical Classification (ASGC).

Accountability attributes

Reporting requirements: National Healthcare Agreement

Organisation responsible for providing data: Australian Institute of Health and Welfare

Further data development / collection required: Specification: Long-term

Developmental work is planned to include a question on the Indigenous status of the baby on state/territory perinatal data collection forms.

The quality of Indigenous identification needs improvement.

Other issues caveats: Currently the Indigenous status of babies is based solely on the Indigenous status of the mother.
