National Indigenous Reform Agreement: P09b-Child under 5 mortality rate (and excess deaths) (ABS Data), 2010

Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: Child under 5 mortality rate (and excess deaths) (ABS Data), 2010

METEOR identifier: 396458

Registration status: Community Services (retired), Superseded 04/04/2011

Description: There are two measures for this indicator:

Measure (1a): Mortality rates for children aged less than five years, by Indigenous

status

Measure (1b): Excess deaths for Indigenous children aged less than five years.

The Australian Bureau of Statistics (ABS) data for this indicator is for perinatal mortality, infant mortality, child 1-4 years mortality and child 0-4 years mortality.

Rationale: High level of public interest. Key measure for the 'Closing the Gap' indicator of

halving the gap in mortality rates for children under 5.

Indicator set: National Indigenous Reform Agreement (2010)

Community Services (retired), Superseded 04/04/2011

Outcome area: Indigenous children have the same health outcomes as other Australian children

Indigenous, Standard 21/07/2010

Data quality statement: National Indigenous Reform Agreement: P09b-Child under 5 mortality rate (and

excess deaths) (ABS Data), 2010 QS

Community Services (retired), Superseded 04/04/2011

Collection and usage attributes

Population group age to: Under 5 years of age

Computation description: Part A: Number, rate, rate ratio and rate difference

Part B: Excess deaths: Observed number of Indigenous deaths among perinatals, infants, children aged 1–4 years and children aged 0–4 years less expected number of deaths among Indigenous children of the corresponding age group if the age specific rate of the non-Indigenous population was applied to the Indigenous

population.

Computation: Part A:

Perinatal and infant mortality rates: 1000 x (Numerator ÷ Denominator)

Children 1-4 and 0-4 mortality rates: 100,000 x (Numerator ÷ Denominator)

Part B: Excess deaths: Observed number of Indigenous deaths among children aged 0-4 years less expected number of deaths among Indigenous children aged 0-4 years if the age specific rate of the non-Indigenous population was applied to

the Indigenous population.

Numerator: Perinatal: Number of perinatal deaths (foetal and neo-natal)

Infant: Number of deaths among children aged 0-1 years

Children 1-4: Number of deaths among children aged 1-4 years

Children 0-4: Number of deaths among children 0 to 4 years

Comments:

Disaggregation: National and selected state/territories by Indigenous status

Most recent data available for 2010 CRC baseline report: 2007

At this stage, only data from selected state/territories are considered of acceptable quality for reporting mortality of Indigenous persons (NSW, Qld, WA, SA and NT).

Due to small number of Indigenous deaths reported each year, 5 year combined data will be reported.

Accountability attributes

Organisation responsible for providing data:

Australian Bureau of Statistics

Further data development / Specification: Long-term

collection required:

The statistical agencies and state/territory governments are currently working with Registrars and funeral directors and doctors to improve the quality of Indigenous

status information on death notification forms and death certificates.

Indigenous identification needs improvement in deaths data.

Other issues caveats:

Indigenous child mortality data is subject to high variability due to small numbers of

deaths among children 0 to 4 years.
