National Indigenous Reform Agreement: PI 05-Average daily alcohol consumption and associated risk levels; rates of alcohol consumption at longterm risky to high risk levels, 2012

Identifying and definitional attributes

Metadata item type:	Indicator	
Indicator type:	Indicator	
Short name:	Ime:PI 05-Average daily alcohol consumption and associated risk levels; rates of alcohol consumption at long-term risky to high risk levels, 2012	
METEOR identifier:	438585	
Registration status:	Indigenous, Superseded 13/06/2013	
Description:	Proportion of Australians who consume alcohol at risky/high risk levels, by Indigenous status.	
Rationale:	Excessive alcohol consumption is a major risk factor that contributes to ill health. Of those who drink, Indigenous Australians are more likely to consume alcohol at risky/high risk levels. Reducing the rate at which Indigenous Australians to drink at hazardous levels will assist in closing the gap in life expectancy.	
Indicator set:	tor set: <u>National Indigenous Reform Agreement (2012)</u> Indigenous, Superseded 13/06/2013	
Outcome area:	Indigenous people remain healthy and free of preventable disease Indigenous, Standard 21/07/2010	

Collection and usage attributes

Population group age from:	18 years	
Computation description:	Crude rates are calculated for Indigenous Australians.	
	Age-standardised rates are calculated for Indigenous and non-Indigenous Australians.	
	95% Confidence intervals and relative standard errors are calculated for crude and age-standardised rates.	
	Rate ratios and rate differences are calculated for Indigenous:non-Indigenous.	
	Presentation: Per 100 persons (percentage).	
Computation:	Crude rate: 100 x (Numerator ÷ Denominator).	
	Age-standardised rate: calculated using the direct method with the 2001 Australian population as at 30 June as the standard. Ten year age groups are used from 0-4 to 55 years and over to be consistent with published estimates by the ABS.	
	Rate ratio: Indigenous age-standardised rate divided by non-Indigenous age- standardised rate.	
	Rate difference: Indigenous age-standardised rate minus non-Indigenous age- standardised rate.	
Numerator:	People aged 18 years or over assessed as having risky or high-risk alcohol consumption.	
Numerator data elements:	Data Element / Data Set	
	Person—alcohol consumption frequency (self-reported), code NN

Comments:

NO NEW DATA FOR 2012 REPORTING.

Most recent data available: 2004-05 NATSIHS (Indigenous); 2004-05 NHS (non-Indigenous).

Risky and high/risk alcohol consumption based on estimated average daily consumption.

This indicator meets two COAG specific outcome areas: Indigenous people remain healthy and free of preventable disease *and* Alcohol and other drug abuse among Indigenous people is overcome.

At this stage, data are available for persons aged 15 years and over only. Data from the NATSIHS are available for remote and very remote areas. The NHS does not cover very remote areas.

Baseline year for NIRA target (Close the life expectancy gap within a generation) is 2006; baseline year for this indicator is 2004-05; target year is 2031.
