Stillbirth (fetal death)

Identifying and definitional attributes

Metadata item type:	Glossary Item
METEOR identifier:	482008
Registration status:	Health , Superseded 03/12/2020 Indigenous , Superseded 14/07/2021 Tasmanian Health , Superseded 24/03/2023
Definition:	<p>A fetal death prior to the complete expulsion or extraction from its mother of a product of conception of 20 or more completed weeks of gestation or of 400 grams or more birthweight.</p> <p>The death is indicated by the fact that after such separation the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.</p>
Context:	Perinatal statistics.

Collection and usage attributes

Comments:	<p>Terminations of pregnancy performed at gestational ages of 20 or more weeks should be included in perinatal collections and should be recorded either as stillbirths or, in the unlikely event of showing evidence of life, as live births.</p> <p>Fetus papyraceous and fetus compressus are products of conception recognisable as a deceased fetus. These fetal deaths are likely to have occurred before 20 weeks gestation but should be included as stillbirths in perinatal collections if they are recognisable as a fetus and have been expelled or extracted with other products of conception at 20 or more weeks gestational age.</p>
