Person with cancer—clinical trial experimental agent or intervention, text X[X(399)]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Clinical trial experimental agent or intervention
METEOR identifier:	487311
Registration status:	Health , Standard 14/05/2015
Definition:	The experimental agent or intervention used in a clinical trial for the treatment or management of cancer, as represented in text.
Data Element Concept:	Person with cancer—clinical trial experimental agent or intervention
Value Domain:	Text X[X(399)]

Value domain attributes

Representational attributes

Representation class:	Text
Data type:	String
Format:	X[X(399)]
Maximum character length:	400

Data element attributes

Collection and usage attributes

Guide for use:	<p>Briefly outline the experimental agent or intervention used in the clinical trial in text.</p> <p>A clinical trial is a controlled experiment involving a defined set of subjects and having a clinical event as an outcome measure. It is intended to yield scientifically valid information about the efficacy or safety of a medical intervention such as, for example, a drug, surgical procedure or diagnostic test.</p> <p>This item is completed when a person with cancer has been offered and accepted clinical trial entry.</p>
Collection methods:	This information should be sought from the patient's medical records.
Comments:	<p>Information regarding the types of clinical trials patients are enrolled in may have implications for access to, and the provision of, cancer services.</p> <p>The collection of specific treatment information may also be useful to evaluate patterns of care, the effectiveness of different treatment modalities, and treatment by patient outcome.</p>
