Patient—type of Australian Hearing aid, code N

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Type of Australian Hearing aid (code)

METEOR identifier: 508338

Registration status: Indigenous, Standard 05/09/2014

Definition: The type of hearing aid that has been given medical clearance and is to be fitted to

a patient by Australian Hearing, as represented by a code.

 Data Element Concept:
 Patient—type of Australian Hearing aid

 Value Domain:
 Type of Australian Hearing aid code N

Value domain attributes

Representational attributes

Representation class: Code

Data type: Number

Format: N

Maximum character length: 1

Value Meaning

Permissible values: 1 Bone conductor aid

2 Hearing aid(s) with mould

Supplementary values: 8 Unknown

9 Not stated/inadequately described

Collection and usage attributes

Guide for use: CODE 1 Bone conductor aid

A hearing aid which works by conducting, or carrying, sound through the bone in the skull. Sounds are heard when the vibrations of the sound are transmitted directly from the vibrating part of the bone conduction hearing aid through the skull to the cochlea, missing out the outer and middle ears.

CODE 2 Hearing aid(s) with mould

An over the ear hearing aid that uses a microphone and amplifier to transmit sound. An earmould is usually a piece of plastic, acrylic or other soft material shaped to fit a patient's ear canal, and/or the outer ear structure (concha) surrounding the ear

canal. The hearing aid receiver is worn behind the ear.
