Diphtheria, tetanus and pertussis vaccine (DTPa)

Identifying and definitional attributes

Metadata item type:	Glossary Item
METEOR identifier:	523497
Registration status:	National Health Performance Authority (retired) , Retired 01/07/2016
Definition:	A vaccine that protects against diphtheria, tetanus and pertussis (whooping cough). The DTP used in Australia and many other industrialised countries is DTPa, which contains an acellular pertussis component made of refined pertussis extracts. The acronym DTPa, using capital letters, signifies child formulations of diphtheria, tetanus and acellular pertussis-containing vaccines, and denotes the substantially larger amounts of diphtheria toxoid and pertussis.
