National Healthcare Agreement: Pl 24-Survival of people diagnosed with notifiable cancers, 2015

Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Progress measure

Short name: PI 24-Survival of people diagnosed with cancers, 2015

METEOR identifier: 559018

Registration status: Health, Superseded 08/07/2016

Description: Five-year relative survival proportions for people diagnosed with cancer.

Indicator set: National Healthcare Agreement (2015)

Health, Superseded 08/07/2016

Outcome area: Hospital and Related Care

Health, Standard 07/07/2010

National Health Performance Authority (retired), Retired 01/07/2016

Data quality statement: National Healthcare Agreement: PI 24-Survival of people diagnosed with notifiable

cancers, 2015 QS

Health, Superseded 31/01/2017

Collection and usage attributes

Computation description: The probability of surviving five years in people with cancer is divided by the

probability of surviving five years in the general population (matched on age, sex

and calendar year).

Analysis will be undertaken using the 'period' method of calculation. See <u>Cancer</u>

survival and prevalence in Australia: period estimates from 1982 to 2010 (2012

Cancer Series no. 69. Cat. No. 65).

Analyses by state and territory, remoteness and Socio-Economic Indexes for Areas

(SEIFA) Index of Relative Socioeconomic Disadvantage (IRSD) are based on

usual residence of person at diagnosis.

Presented as a percentage.

Computation: 100 x (Numerator ÷ Denominator)

Numerator: Probability of surviving for five years in the people diagnosed with cancer.

Numerator data elements:

Data Element / Data Set
