Identifier—replacement identifier designation, text X[X(19)]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Replacement identifier designation
Synonymous names:	Identifier replaced by; Active identifier.
METEOR identifier:	610794
Registration status:	Health , Standard 05/10/2016
Definition:	The identifier to be used for an entity instead of the identifier previously assigned, as represented by text.
Data Element Concept:	Identifier—replacement identifier designation
Value Domain:	Text X[X(19)]

Value domain attributes

Representational attributes

Representation class:	Text
Data type:	String
Format:	X[X(19)]
Maximum character length:	20

Data element attributes

Collection and usage attributes

Guide for use:	A minimum of one record will require a new identifier.
Comments:	<p>This data element provides a way of indicating that more than one identifier has been issued to the one entity, and that the identifier from this data element is the one that should be used.</p> <p>The objective of this data element is to support the manual process of merging records. If multiple identifier numbers have been issued to the one entity, these records should be merged. Only one identifier is retained as an active identifier, while all other identifiers become inactive. These inactive identifiers should not be reissued or re-used. This data element helps to connect the inactive identifier(s) with the active identifier. All information held with the inactive identifier(s) should be linked to the active identifier in the event that an error has been made and 'unmerging' is required.</p>
