Comments:

There are no updated data available for this cycle of reporting.

The most recent data from the 2011 Census are available in the 2014 report. That report included disaggregation by remoteness.

The baseline report reported data from the 2006 Census as the supplementary data collection.

Baseline year for NIRA target (Halve the gap in employment outcomes between Indigenous and non-Indigenous Australians within a decade) is 2008; baseline year for this measure is 2006.

Two Census data specifications are provided. The second specification is designed to allow for comparisons to be made with survey data. The survey data, unlike the Census data, exclude people living in non-private dwellings, members of the permanent defence forces and members of foreign representations.
