Mental health phase of care—number of leave days, total N[NN]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Mental health phase of care leave days
METEOR identifier:	654341
Registration status:	Health , Superseded 17/01/2020
Definition:	The total number of days spent on leave from a health care service during a mental health phase of care.
Data Element Concept:	Mental health phase of care—number of leave days
Value Domain:	Total days N[NN]

Value domain attributes

Representational attributes

Representation class:	Total
Data type:	Number
Format:	N[NN]
Maximum character length:	3
Unit of measure:	Day

Data element attributes

Collection and usage attributes

Guide for use:	A day is measured from midnight to midnight. Leave days can occur for a variety of reasons, including:
----------------	---

- treatment by a specialised mental health service
- treatment by a non-specialised health service
- time in the community.

The following rules apply in the calculation of leave days:

- the day the [patient](#) goes on leave is counted as a leave day
- days the patient is on leave are counted as leave days
- the day the patient returns from leave is not counted as a leave day
- if the patient starts a mental health phase of care and goes on leave on the same day, this is not counted as a leave day
- if the patient returns from leave and then goes on leave again on the same day, this is counted as a leave day
- if the patient returns from leave and has a mental health phase of care change on the same day, the day should not be counted as a leave day.

If a patient fails to return from leave, then the episode of mental health care is formally ended with the separation date recorded as the day the patient went on leave.
