Data quality

Data quality statement summary:

Description

Data are provided annually to the Australian Institute of Health and Welfare (AIHW) by jurisdictions and are sourced from Community Housing Organisations (CHOs) via a survey and from the jurisdiction's administrative systems. The annual data collection captures information about CHOs, the dwellings and tenancy rental units they manage, households on the waiting list, and the tenants and households assisted. Limited financial information from the previous financial year is also collected.

Summary

- All states and territories provide the AIHW with community housing data from their administrative systems. The AIHW compiles their data for national reporting in the *Report on government services* (RoGS). The data are also published in AIHW reports.
- Additionally, unit record community housing data are collected from CHOs via a survey tool managed by the AIHW. One jurisdiction, the Northern Territory, does not use the AIHW-managed survey and do not provide any unit record household data.
- Care is required when comparing outputs across states and territories. Differences in the data collected, including which records are included or excluded from a calculation can affect the coherence of the outputs. Coherence over time has been affected by changes in methodology (see 'coherence' section for details).

Institutional environment:	<p>The Australian Institute of Health and Welfare (AIHW) is a major national agency set up by the Australian Government under the Australian Institute of Health and Welfare Act 1987 to provide reliable, regular and relevant information and statistics on Australia's health and welfare. It is an independent corporate Commonwealth entity established in 1987, governed by a management Board, and accountable to the Australian Parliament through the Health portfolio.</p> <p>The AIHW aims to improve the health and wellbeing of Australians through better health and welfare information and statistics. It collects and reports information on a wide range of topics and issues, ranging from health and welfare expenditure, hospitals, disease and injury, and mental health, to ageing, homelessness, disability and child protection.</p> <p>The AIHW also plays a role in developing and maintaining national metadata standards. This work contributes to improving the quality and consistency of national health and welfare statistics. The AIHW works closely with governments and non-government organisations to achieve greater adherence to these standards in administrative data collections to promote national consistency and comparability of data and reporting.</p> <p>One of the main functions of the AIHW is to work with the states and territories to improve the quality of administrative data and, where possible, to compile national data sets based on data from each jurisdiction, to analyse these data sets and disseminate information and statistics.</p> <p>The Australian Institute of Health and Welfare Act 1987, in conjunction with compliance to the Privacy Act 1988, (Commonwealth of Australia), ensures that the data collections managed by the AIHW are kept securely and under the strictest conditions with respect to privacy and confidentiality.</p> <p>For further information see the AIHW website www.aihw.gov.au.</p> <p>The AIHW receives, compiles, edits and verifies the data in collaboration with states and territories. The finalised data sets are signed off by the states and territories and used by the AIHW for reporting and analysis.</p>
Timeliness:	<p>Data are collected annually. The reference period for this collection is the 2015–16 financial year. The collection is mostly a 30 June 2016 snapshot, but also captures 2015–16 household activity. Limited financial information from the 2014–15 financial year is also collected.</p>
Accessibility:	<p>Data are reported in the AIHW's annual Housing assistance in Australia reports and the Productivity Commission's annual Report on government services.</p> <p>Users can request additional disaggregation of data which are not available online or in reports (subject to the AIHW's confidentiality policy and state and territory approval) via the AIHW's online data request system at https://datarequest.aihw.gov.au. Depending on the nature of the request, requests for access to unpublished data may also incur costs or require approval from the AIHW Ethics Committee.</p> <p>General enquiries about AIHW publications can be made to the Digital & Media Communications Unit on (02) 6244 1026 or via email to info@aihw.gov.au.</p>
Interpretability:	<p>Metadata and definitions relating to this data source can be found in the National housing and homelessness data dictionary (AIHW Cat no. HOU269).</p> <p>Supplementary information can be found in the housing collection data manuals which are available upon request.</p>

Relevance:

The scope of community housing, for the purpose of this collection, includes all tenancy rental units under the management of a community housing organisation, excluding Indigenous community housing organisations. Dwellings are excluded where the tenancy is managed by the state/territory housing authority or by a specialist homelessness services agency. Additional jurisdiction-specific inclusions and exclusions also apply. These jurisdiction-specific inclusions and exclusions reflect a number of factors including differences in the definition of community housing across jurisdictional legislation, difficulties in identifying some organisations among those that are not registered or funded by the state/territory housing authority, and some inconsistencies in reporting, such as the inclusion of transitional housing and National Rental Affordability Scheme (NRAS) dwellings owned or managed by CHOs.

The data collected by the jurisdictions conform well in terms of reference period. However, due to the jurisdiction-specific inclusions and exclusions, the data do not conform well in terms of organisation coverage and reporting at a national level.

New South Wales, Victoria, Western Australia, South Australia, Tasmania and the Australian Capital Territory supply unit record level data. These data include details on individuals, organisations, dwellings and associated tenancies of the organisations that responded to the survey. Queensland supply unit record data supplemented by aggregate administrative data for funded organisations, properties and current waitlist applications. The Northern Territory submits aggregate data, which includes dwelling- and organisational-level data, but not information on individual tenancies or persons.

The data are highly relevant for monitoring trends in the number of households assisted in community housing. The data are used for many purposes, including by policy-makers to evaluate both the living conditions of tenants in community housing dwellings, the amount of rent paid by tenants relative to their income, and to assess the efficiency of community housing organisations in providing dwellings.

Accuracy:

The information was sourced via a survey of community housing organisations conducted by state/territory housing authorities and/or from administrative records held by them. Data are incomplete for some jurisdictions due to non-reporting or under-reporting by CHOs. The response rate differs between jurisdictions—as outlined below:

State/territory	Coverage
New South Wales	Of the 150 community housing organisations, 31 completed the survey tool accounting for 92% of the total dwelling portfolio. This represents a decline from the 98% coverage rate in 2014–15.
Victoria	Of the 96 community housing organisations, 80 completed the survey tool accounting for 95% of the total dwelling portfolio. This represents a decline from the 99% coverage rate in 2014–15.
Queensland	Of the 272 community housing organisations, 85 completed the survey tool accounting for 84% of the total dwelling portfolio. This is not comparable to 2014–15 due to a change in methodology.
Western Australia	Of the 32 registered community housing organisations, 29 completed the survey tool accounting for 98% of the total dwelling portfolio. This represents an increase from the 93% coverage rate in 2014–15.
South Australia	All of the 50 community housing organisations completed the survey tool covering 100% of the total dwelling portfolio. The same coverage rate was observed in 2014–15.
Tasmania	Of the 66 community housing organisations, 50 completed the survey tool accounting for 96% of the total dwelling portfolio. This represents a slight decrease from the 98% coverage rate in 2014–15.
Australian Capital Territory	All of the 5 community housing organisations completed the survey tool covering 100% of the total dwelling portfolio. The same coverage rate was observed in 2014–15.

Northern Territory	Only administrative data was provided for 33 community housing organisations. This is a slight increase from the 32 community housing organisations that provided administrative data in 2014–15.
--------------------	---

There are some accuracy issues with the data collected, more specifically:

- The community housing organisation and state/territory housing authority administrative systems from which this collection are drawn have inaccuracies to varying degrees including missing data, inconsistent data, out-of-date data and data coding or recording errors.
- Not all organisations capture and report all data items—data may not be collected and reported in a manner consistent with national data definitions.
- For some organisations, some information may be self-identified and not reported under eligibility requirements for some programs (for example, Indigenous status and disability information).
- The sum of 'tenancy rental units by remoteness' may differ to 'total tenancy rental units' due to missing postcode information, the exclusion of postcodes belonging to PO boxes, mismatches between postcode and remoteness concordance files and proportioning of postcodes across remoteness areas (as many postcodes belong to more than one remoteness area).
- There are inconsistencies across jurisdictions in the reporting of National Rental Affordability Scheme (NRAS) properties managed by community housing organisations. Data for these properties was unavailable for Queensland, the Australian Capital Territory and the Northern Territory. New South Wales reported data on NRAS properties for the first time in 2015–16.
- Waitlist data are reported separately for each social housing program. Where states and territories have an integrated waitlist (New South Wales, Queensland, Western Australia, the Australian Capital Territory and the Northern Territory), applicants are generally counted once irrespective of the number of programs for which they are applying. In some states and territories, CHOs may additionally maintain and allocate housing to households on their own waiting list.

State- and territory-specific issues:

New South Wales

- Data quality submissions vary across data providers. Data mismatches between files relating to the same concept are a significant data quality issue.
- The number of New South Wales tenancies is likely to be undercounted because of unknown number of tenancies assigned, number of tenancies, tenantable vacancies and untenable vacancies.

Queensland

- Queensland provided unit record data for the first time in 2015–16. This is supplemented by aggregate administrative data for funded organisations, properties and current waitlist applications. Data prior to this is therefore not comparable as dwelling and tenancy information was provided in aggregate form only prior to 2015–16.
- Survey data are based on the response rate of approximately 84% of tenantable rental units. Where possible, Queensland uses administrative data (for example, new allocations) to supplement incomplete CHO survey data.

Western Australia

- Care is advised when reviewing data for overcrowding due to inconsistencies in the data reported.
- Errors have occurred when Commonwealth Rent Assistance (CRA) has been considered as income and used in the calculation of rent. This issue has been compounded when CRA has not been able to be separated from either income or rent charged. While this has improved since 2014–15, some organisation still don't separate CRA from income, therefore caution should be taken when interpreting data pertaining to rent charged and gross weekly income.

Tasmania

- Survey data received from CHOs contained a large number of errors and a high proportion of 'unknown' data. While substantial data cleaning was undertaken, it is likely that data quality issues still exist.

Australian Capital Territory

- Care is advised when reviewing data for overcrowding due to inconsistencies in the data reported between CHOs.

Coherence:

• Integrated waitlist data are unable to differentiate between new applicants, and applicants requesting a transfer. Data for individual states and territories may not be comparable across reporting periods, nor with other social housing sectors due to variability in the state and territory government programs reported in the community housing data collection; coverage and completeness rates; and other data quality issues. Differences between states and territories concerning incomplete or missing information, out-of-date information and coding errors can affect the coherence of the outputs

Coherence over time has also been affected by changes in methodology:

- Comparisons of waitlist data prior to 2010–11 should not be made with data from subsequent years due to the implementation of integrated waitlists in some jurisdictions. In May 2009, Housing Ministers agreed to integrate public and community housing waiting lists in all jurisdictions by July 2011. New South Wales, Queensland, Western Australia, the Australian Capital Territory, and the Northern Territory each have integrated waiting lists. South Australia has a register that integrates multiple community housing waiting lists into a single housing register. In Tasmania, the 4 main Better Housing Futures community housing providers use a shared Housing Register (public and community housing) to select tenants. The other smaller providers have no requirement to use this register and therefore may have their own waitlists. In Victoria, community housing organisations may fill some vacancies using the public housing waiting list.
- Measurements using low income cannot be directly compared with low income figures produced prior to 2013–14 due to a change in methodology. Low income cut-offs were revised for 2014–15 data based on ABS 2013–14 Survey of Income and Housing results. This led to substantial increases in the number of households considered to be receiving a low income. Care is therefore required when comparing 2014–15 data with previous years.

State- and territory-specific issues:

New South Wales

- From 2013–14, New South Wales have provided unit record data. Data prior to this is therefore not comparable.
- In 2014–15, the tenancy management of 666 public rental housing dwellings was transferred to the community housing sector with a corresponding impact on the number of households assisted.

Victoria

- In 2014–15, the reduction in the number of CH providers was due to two organisations no longer providing CH services and one provider merging with another provider.

Queensland

- Queensland provided unit record data for the first time in 2015–16. This is supplemented by aggregate administrative data for funded organisations, properties and current waitlist applications. Data prior to this is therefore not comparable.
- From 2013–14, Affordable Housing Program data has been provided. These data were not available in prior collection periods.
- Improvements have been made to the identification of households containing a member identifying as Indigenous, and/or having a disability and/or from a non-English speaking background.

Western Australia

- From 2014–15, methodological changes have resulted in a better identification of households with Indigenous members.

South Australia

- In 2015–16, the number of in-scope CH dwellings increased due to the transition of about 1,000 public rental housing dwellings to the community sector.
- From 2014–15, methodological improvements have resulted in better identification of households with Indigenous members.
- Prior to 2012–13, the waitlist data reported were based solely on the Community Housing Customer Register. Applicants for National Rental Affordability Scheme (NRAS) properties were registered on a separate waitlist and not reported. Since 2012–13, waitlist data have been reported for the total number of applicants for community housing and affordable housing.
- As affordable housing rent setting policies are based on a discount to the market and not as a proportion of income (the norm for community housing), the inclusion of affordable housing data would tend to increase the proportion of income allocated to rent.

Tasmania

- The number of in-scope CH dwellings increased significantly in 2013–14 and 2014–15. This was mainly due to the transition of about 3,500 public rental housing dwellings to the community sector under the Better Housing Futures program during this period.

Northern Territory

- Changes to stock holdings changed the distribution of tenancy rental units by remoteness area.
- A review of portfolios in 2014–15 resulted in better identification of community housing dwellings.
