Female—type of diabetes mellitus therapy during pregnancy, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Diabetes therapy type during pregnancy
METEOR identifier:	668948
Registration status:	Health , Superseded 12/12/2018
Definition:	The type of diabetes mellitus treatment which a female is prescribed during pregnancy, as represented by a code.
Data Element Concept:	Female—type of diabetes mellitus therapy during pregnancy
Value Domain:	Type of diabetes mellitus therapy during pregnancy code N

Value domain attributes

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N
Maximum character length:	1

	Value	Meaning
Permissible values:	1	Insulin
	2	Oral hypoglycaemic
	3	Diet and exercise
Supplementary values:	9	Not stated/inadequately described

Collection and usage attributes

Guide for use:	<p>All therapies prescribed during pregnancy should be recorded. Therefore more than one code can be selected when reporting this item.</p> <p>CODE 2 Oral hypoglycaemic</p> <p>This code includes the options of sulphonylurea, biguanide (e.g. metformin), alpha-glucosidase inhibitor, thiazolidinedione, meglitinide, combination (e.g. biguanide and sulphonylurea), or other.</p> <p>CODE 3 Diet and exercise</p> <p>This code includes the options of generalised prescribed diet; avoid added sugar/simple carbohydrates (CHOs); low joule diet; portion exchange diet and uses glycaemic index and a recommendation for increased exercise.</p> <p>CODE 9 Not stated/inadequately described</p> <p>To be recorded by data entry personnel (state/territory health authority) if the data field is left blank or is inadequately completed in the perinatal data collection form or extract. Clinicians should not record Code 9.</p>
-----------------------	---

Data element attributes

Collection and usage attributes

Collection methods: Jurisdictions that record perinatal data using the ICD-10-AM should apply the following codes, noting that the ICD-10-AM uses a hierarchical coding system for therapy type, and therefore not all types of therapy will necessarily be recorded:

'Code 1 Insulin' is equivalent in the ICD-10-AM to a code in the range O24.1–O24.9 used in conjunction with the fifth character '2' (insulin treated). Note that where a female has Type 1 diabetes, there is no equivalent fifth character applied to the ICD-10-AM code because Type 1 diabetes is always insulin-treated.

'Code 2 Oral hypoglycaemic' is equivalent in the ICD-10-AM to a code in the range O24.1–O24.9 used in conjunction with the fifth character '3' (oral hypoglycaemic therapy).

'Code 3 Diet and exercise' is equivalent in the ICD-10-AM to a code in the range O24.1–O24.9 used in conjunction with the fifth character '4' (other; diet; exercise; lifestyle management).

For example, for a female who has pre-existing Type 2 diabetes mellitus and uses oral hypoglycaemic therapy and insulin, this would be coded in the ICD-10-AM as O2412 and would be reported against this data item using Code 1.
