Person—cardiovascular disease condition targeted by drug therapy

Identifying and definitional attributes

Metadata item type: Data Element Concept

METEOR identifier: 696063

Registration status: Health, Standard 17/10/2018

Definition: The condition(s) for which drug therapy is being used for the prevention or long-

term treatment of cardiovascular disease in a person.

Context: Public health, health care and clinical settings:

Its main use is to enable categorisation of drug management regimens used in the community for the long-term care of patients with or at increased risk of vascular

disease.

Object Class attributes

Identifying and definitional attributes

Object class: Person

Definition: A human being.

Collection and usage attributes

Comments: Prior to 13 March 2018, the definition of the 'Person' Object class was 'A human

being, whether man, woman or child'. From 13 March 2018, the definition was edited by removing the words '...whether man, woman or child' so that a person is defined as 'A human being'. This amendment was undertaken to align the definition of a person with the *Australian Government Guidelines on the Recognition of Sex and Gender* and the Australian Bureau of Statistics (ABS) *Standard for Sex and Gender Variables*, which recognise that there are sex and gender types that are

not exclusively male or female.
