2. Human function

Identifying and definitional attributes

Item type:	Framework Dimension
METEOR identifier:	721650
Description:	Chronic diseases, residual injuries, permanent damage or defects from birth can impair how well a person functions day to day. How people experience and cope with a disability can be greatly affected by the opportunities and services provided for them. Human function can be measured by alterations to body structure or function (impairment), activity limitations and restrictions in participation. Severe or profound core activity limitation can be measured by calculating the percentage of people who 'sometimes' or 'always' need help with core activities of daily living (mobility, self-care or communication). The likelihood of having a severe or profound core activity limitation generally increases with age.

Indicators in this framework

- [Australian Health Performance Framework: PI 3.2.1–Severe or profound core activity limitation, 2020 Health](#), Superseded 07/09/2023
- [Australian Health Performance Framework: PI 3.2.1–Severe or profound core activity limitation, 2019 Health](#), Superseded 01/12/2020
- [Australian Health Performance Framework: PI 3.2.1–Severe or profound core activity limitation, 2021 Health](#), Standard 07/09/2023
