Specialised mental health service—admitted patient service unit name, text XXX[X(97)]

Exported from METEOR (AIHW's Metadata Online Registry)

Specialised mental health service—admitted patient service unit name, text XXX[X(97)]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Admitted patient mental health service unit name
METEOR identifier:	721830
Registration status:	Health, Standard 16/01/2020
Definition:	The appellation by which a specialised mental health admitted patient service unit is known or called, as represented by text.
Data Element Concept:	Specialised mental health service—admitted patient service unit name
Value Domain:	Text XXX[X(97)]

Value domain attributes

Representational attributes

Representation class:	Text
Data type:	String
Format:	XXX[X(97)]
Maximum character length:	100

Data element attributes

Collection and usage attributes

Guide for use:	Admitted patient service units should be differentiated by target population and program type. For example, if a hospital had separate wards for child and adolescent and general adult populations, these should be reported as separate service units. Similarly, if the hospital provided separate wards for older persons acute and older persons other program types, such as rehabilitation or extended care, this would require separate service units to be identified (that is, defined by the Specialised mental health service—admitted patient care program type, code N data element as well as the Specialised mental health service—target population group, code N data element). Where a hospital has, for example, two older persons acute admitted patient service units, these only need to be reported as one combined older persons acute admitted patient service unit to satisfy the minimum reporting requirements for NMDS purposes but could be reported as two separate service units if desired. For additional information, please refer to the glossary item **Admitted patient mental health care service.** The admitted patient service unit name should be unique for the service unit in that state/territory. Where applicable, service unit reporting structures should be identical between all mental health collections (e.g., Mental Health National Minimum Data Sets and the Mental Health National Outcomes and Casemix Collection (NOCC)).

    [Health,](#) Superseded 06/12/2023
Implementation start date: 01/07/2023
Implementation end date: 30/06/2024
Conditional obligation:

For use in the National Outcomes and Casemix Collection (NOCC), this data element applies when the service provision setting is **[admitted patient mental health care service](#)**.

Data must be collected for either this data element or one of [Specialised mental health service—ambulatory service unit name, text XXX[X(97)]](#) or [Specialised mental health service—residential service unit name, text XXX[X(97)]](#).

DSS specific information:

For the National Outcomes and Casemix Collection (NOCC), admitted patient service units should be differentiated by target population (general, older persons, child and adolescent, youth, and forensic) and program type (acute vs other). For example, if a hospital had separate wards for child and adolescent and general adult populations, these should be reported as separate service units. Similarly, if the hospital provided separate wards for older persons acute and older person other program types, this would require separate service units to be identified (i.e., defined by the program type as well as the target population). The overarching principle is that the same service unit identification policy must be applied to the admitted patient service units' data reported under reported under the NOCC and the [Mental health establishments NMDS 2023–24](#).

The service unit name is reported at each collection occasion.

Ideally, where a mental health service provides mixed service types (e.g., overnight inpatient care as well as ambulatory care), each component will be defined as a separate service unit.
