# Indigenous-specific primary health care: PI21b- Proportion of Indigenous regular clients who have an absolute cardiovascular disease (CVD) risk assessment result within specified levels, December 2020

## Identifying and definitional attributes

<b>Metadata item type:</b>	Indicator
<b>Indicator type:</b>	Indicator
<b>Short name:</b>	PI21b-Proportion of Indigenous regular clients who have an absolute cardiovascular disease (CVD) risk assessment result within specified levels, December 2020
<b>METEOR identifier:</b>	739470
<b>Registration status:</b>	<a href="#">Indigenous</a> , Superseded 03/07/2022
<b>Description:</b>	<p>Proportion of <a href="#">Indigenous regular clients</a>, aged 35 to 74 and with no known history of cardiovascular disease (CVD), who had an absolute CVD risk assessment recorded within the previous 24 months and whose CVD risk was categorised as one of the following:</p> <ul style="list-style-type: none"><li>• High (greater than 15% chance of a cardiovascular event in the next 5 years)</li><li>• Moderate (10–15% chance of a cardiovascular event in the next 5 years)</li><li>• Low (less than 10% chance of a cardiovascular event in the next 5 years).</li></ul>
<b>Rationale:</b>	<p>Early identification of persons at high CVD risk is important for effective prevention and management of the underlying disease. This is particularly the case for Indigenous Australians because of their poor CVD outcomes.</p> <p>Since a number of risk factors contribute to the development of CVD in an accumulative fashion, using two or more risk factors to assess risk has greater predictive power and is more accurate than if considered alone. Basing management decisions using multiple CVD risk factors therefore should improve health outcomes.</p>
<b>Indicator set:</b>	<a href="#">Indigenous-specific primary health care national key performance indicators December 2020</a> <a href="#">Indigenous</a> , Superseded 03/07/2022
<b>Outcome area:</b>	<a href="#">Indigenous Australians achieve health outcomes comparable to the broader population</a> <a href="#">Indigenous</a> , Superseded 25/02/2024

## Collection and usage attributes

<b>Population group age from:</b>	35 years
<b>Population group age to:</b>	74 years

**Computation description:** Proportion of [Indigenous regular clients](#), aged 35 to 74 and with no known history of cardiovascular disease (CVD), who had an absolute CVD risk assessment recorded within the previous 24 months and whose CVD risk was categorised as one of the following:

- High (greater than 15% chance of a cardiovascular event in the next 5 years)
- Moderate (10–15% chance of a cardiovascular event in the next 5 years)
- Low (less than 10% chance of a cardiovascular event in the next 5 years).

Presented as percentage.

**Computation:**  $(\text{Numerator} \div \text{Denominator}) \times 100$

**Numerator:** Calculation A: Number of Indigenous regular clients, aged 35 to 74 and with no known history of cardiovascular disease (CVD), who had an absolute CVD risk assessment recorded within the previous 24 months with risk assessed as high (greater than 15% over the next 5 years).

Calculation B: Number of Indigenous regular clients, aged 35 to 74 and with no known history of cardiovascular disease (CVD), who had an absolute CVD risk assessment recorded within the previous 24 months with risk assessed as moderate (10–15% over the next 5 years).

Calculation C: Number of Indigenous regular clients, aged 35 to 74 and with no known history of cardiovascular disease (CVD), who had an absolute CVD risk assessment recorded within the previous 24 months with risk assessed as low (less than 10% over the next 5 years).

**Numerator data elements:**

**NMDS / DSS**

[Indigenous-specific primary health care NBEDS December 2020](#)

**Disaggregation:**

1. Sex
  - a) Male
  - b) Female.
2. Age group:
  - a) 35–44 years
  - b) 45–54 years
  - c) 55–64 years
  - d) 65–74 years.

## Disaggregation data elements:

### Data Element / Data Set

[Person—age, total years N\[NN\]](#)

#### Data Source

[Aboriginal and Torres Strait Islander specific primary health care national Key Performance Indicators \(nKPI\) data collection](#)

#### NMDS / DSS

[Indigenous-specific primary health care NBEDS December 2020](#)

#### Guide for use

Aged 35–74 only.

### Data Element / Data Set

[Person—sex, code X](#)

#### Data Source

[Aboriginal and Torres Strait Islander specific primary health care national Key Performance Indicators \(nKPI\) data collection](#)

#### NMDS / DSS

[Indigenous-specific primary health care NBEDS December 2020](#)

## Comments:

Census date for reporting is 31 December 2020.

## Representational attributes

**Representation class:** Percentage

**Data type:** Real

**Unit of measure:** Person

**Format:** N[NN].N

## Indicator conceptual framework

**Framework and dimensions:** [Effective/Appropriate/Efficient](#)

## Data source attributes

### Data sources:

#### Data Source

[Aboriginal and Torres Strait Islander specific primary health care national Key Performance Indicators \(nKPI\) data collection](#)

#### Frequency

6 monthly

#### Data custodian

Australian Institute of Health and Welfare.

## Accountability attributes

**Reporting requirements:** Funding agreements between the Department of Health and the organisations funded under the Indigenous Australians' Health Programme (IAHP).

**Organisation responsible for providing data:** Indigenous-specific primary health care organisations or maternal and child health programs/services funded by the Department of Health under its Indigenous Australians' Health Programme (IAHP), referred to as funded organisations.

**Accountability:** Australian Institute of Health and Welfare/Department of Health.

## Source and reference attributes

**Submitting organisation:** Australian Institute of Health and Welfare

## Relational attributes
