Data extract—reference period, date YYYY

Exported from METEOR (AIHW's Metadata Online Registry)

Data extract—reference period, date YYYY

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Reference year
METEOR identifier:	759618
Registration status:	Australian Teacher Workforce Data Oversight Board, Standard 30/08/2022
	Australian Institute of Health and Welfare, Recorded 30/10/2023
Definition:	The interval of time to which data extracted from an information system refers, expressed as YYYY.
Data Element Concept:	Data extract—reference period
Value Domain:	Date YYYY

Value domain attributes

Representational attributes

Representation class:	Date
Data type:	Date/Time
Format:	YYYY
Maximum character length:	4

	Implementation start date: 01/01/1964
	Implementation end date: 31/12/1967
	DSS specific information:
	In the National Mortality Database, the reference year assigned to a death is determined by the scope of the collection and incorporates both registration date

and the date when a record is received by the ABS. Deaths assigned any given reference year will include:

- all deaths registered in Australia during the reference year and received by the ABS by the end of the March quarter of the subsequent year; and
- deaths registered prior to the reference year but not previously received from the Registry nor included in any statistics reported for an earlier period.

Year of Registration is assigned by the Registry of Births, Deaths and Marriages during processing. If Year of Registration is missing from the data received by the Australian Bureau of Statistics, Year of Registration is imputed as the year in which the record is received by the Australian Bureau of Statistics. All records are assigned a Year of Registration.
