Search for metadata items

Exported from METEOR (AIHW's Metadata Online Registry)

Search for metadata items

Metadata items within METEOR can be searched for against the following criteria:

- All attributes - returns metadata items which contain a specified term within any attribute.
- Identifying attributes - returns metadata items which contain a specified term within identifying attributes only i.e. *Metadata item type, Synonymous names, METEOR identifier, Registration status, Definition* and *Context.*
- Title - returns metadata items which contain a specified term within the title only.

For a more sophisticated search, results may also be limited to return metadata items of a specified:

- Metadata item type
- Registration authority
- Registration status
- Registration status change date (metadata developers and registrars only)
- Workgroup (metadata developers and registrars only).

To search for **glossary terms**, select the *Search glossary* link on the left of the *Find metadata* page. These terms are progressively being converted to glossary items and will soon be available via the glossary item metadata item type searching on this page.

To search **knowledgebase content**, select the *Search archive* link on the left of the *Find metadata page.*
