

Children

The following information is applicable to object class specialisations only.

Definition

The name of any object classes which are sub-types of the parent object class.

Obligation

Mandatory completion.

Development rules

At least two children should be specified per facet.

To add a child object class:

1. Click the *Add...* button.
2. This will open the METeOR window in which you can browse all object classes within METeOR.
3. Select the appropriate object class and click *OK*.
