at least 20 weeks of gestation or of 400 grams or more birthweight, where the

product can be live born or stillborn.

Context: Perinatal

Specialisation of: Person/group of persons

#### Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare

# **Property attributes**

### Identifying and definitional attributes

Property: Birth order

**Definition:** The sequence number in the multiple birth. **Context:** National Minimum Data Set (NMDS) Perinatal:

Required to analyse pregnancy outcome according to birth order and identify the individual baby resulting from a multiple birth pregnancy. Multiple births have higher risks of perinatal mortality and morbidity. Multiple birth pregnancies are often associated with obstetric complications, labour and delivery complications, higher rates of neonatal morbidity, low <a href="mailto:birthweight">birthweight</a>, and a higher perinatal death rate.

Data Set Specification (DSS) - Health care client identification:

While this piece of information is normally recorded for multiple births against the mother's record, if the health care client volunteers the information, it should be

recorded.

Property group: Birth event
