Episode of admitted patient care—diagnosis related group

Identifying and definitional attributes

Metadata item type:	Data Element Concept
METEOR identifier:	269660
Registration status:	Health , Standard 01/03/2005 Tasmanian Health , Standard 06/09/2016
Definition:	A patient classification scheme which provides a means of relating the number and types of patients treated in a hospital to the resources required by the hospital.

Object Class attributes

Identifying and definitional attributes

Object class:	Episode of admitted patient care
Definition:	The period of admitted patient care between a formal or statistical admission and a formal or statistical separation , characterised by only one care type.
Context:	Admitted patient care.
Specialisation of:	Service episode

Collection and usage attributes

Guide for use:	This treatment and/or care provided to a patient during an episode of care can occur in hospital and/or in the person's home (for hospital-in-the-home patients).
-----------------------	---

Source and reference attributes

Origin:	Health Data Standards Committee.
----------------	----------------------------------

Property attributes

Identifying and definitional attributes

Property:	Diagnosis related group
Definition:	A resource utilisation classification based on diagnosed conditions, usage of hospital resources, and demographic characteristics of the patient.
Context:	The development of Australian refined diagnosis related groups has created a descriptive framework for studying hospitalisation. Diagnosis related groups provide a summary of the varied reasons for hospitalisation and the complexity of cases a hospital treats. Moreover, as a framework for describing the products of a hospital (that is, patients receiving services), they allow meaningful comparisons of hospitals' efficiency and effectiveness under alternative systems of health care provision.
Property group:	Service provision event
