Person—severe hypoglycaemia history

Identifying and definitional attributes

Metadata item type:	Data Element Concept
METEOR identifier:	269797
Registration status:	Health , Superseded 21/09/2005
Definition:	Whether the individual has had severe hypoglycaemia .
Context:	Public health, health care and clinical settings

Object Class attributes

Identifying and definitional attributes

Object class:	Person
Definition:	A human being.

Collection and usage attributes

Comments:	Prior to 13 March 2018, the definition of the 'Person' Object class was 'A human being, whether man, woman or child'. From 13 March 2018, the definition was edited by removing the words '...whether man, woman or child' so that a person is defined as 'A human being'. This amendment was undertaken to align the definition of a person with the <i>Australian Government Guidelines on the Recognition of Sex and Gender</i> and the Australian Bureau of Statistics (ABS) <i>Standard for Sex and Gender Variables</i> , which recognise that there are sex and gender types that are not exclusively male or female.

Data element concept attributes

Collection and usage attributes

Comments: The medications used in the treatment of diabetes may cause the blood glucose value to fall below the normal range and this is called hypoglycaemia.
