Elective surgery waiting list episode—extended wait patient indicator, code N

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Extended wait patient

METEOR identifier: 269964

Registration status: Health, Standard 01/03/2005

Definition: Whether a patient is an extended wait patient, as represented by a code.

Data Element Concept: Elective surgery waiting list episode—extended wait patient indicator

Value Domain: Extended wait patient indicator code N

Value domain attributes

Representational attributes

Representation class: Code

Data type: Number

Format: N

Maximum character length: 1

Value Meaning

Permissible values: 1 Extended wait patient

2 Other patient

Data element attributes

Collection and usage attributes

Guide for use: A patient is classified as an extended wait patient if the patient is in clinical urgency

category 3 at the time of admission or at a census time and has been waiting for

the elective surgery for more than one year.

Comments: This metadata item is used to identify clinical urgency category 3 patients who had

waited longer than one year at admission or have waited longer than one year at the time of a census. An extended wait patient is not an overdue patient as there is no maximum desirable waiting time specified for patients in clinical urgency category 3 as they have been assessed as not having a clinically urgent need for

the awaited procedure.
