Referral—referral receipt date, DDMMYYYY

Identifying and definitional attributes

Metadata item type: Data Element
Short name: Referral date
METEOR identifier: 270005

Registration status: Community Services (retired), Standard 01/03/2005

Health, Recorded 13/05/2008

Tasmanian Health, Standard 23/11/2016

Definition: The date on which an agency receives a client referral from another party.

Data Element Concept: Referral—referral receipt date

Value Domain: <u>Date DDMMYYYY</u>

Value domain attributes

Representational attributes

Representation class: Date

Data type: Date/Time
Format: DDMMYYYY

Maximum character length: 8

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare

Data element attributes

Collection and usage attributes

Guide for use: This metadata item should always be recorded as an 8 digit valid date comprising

day, month and year. Year should always be recorded in its full 4 digit format. For days and months with a numeric value of less than 10, zeros should be used to ensure that the date contains the required 8 digits. For example if an agency receives a client referral on July 1 2000 the Referral—referral receipt date,

DDMMYYYY should be recorded as 01072000 as specified in the representational

layout.

Collection methods: Can be collected at initial referral of a client to an agency or at each referral,

although this should be done consistently within a collection. Individual collections will also need to determine what constitutes a referral for their purposes (e.g. ls it only formal referrals that are considered, or are self-referral counted as a referral

also etc).
