# Person (address)—health address line, text X[X(179)]

## Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Address line
Synonymous names:	Address line
METEOR identifier:	270016
Registration status:	<a href="#">Health</a> , Superseded 04/05/2005
Data Element Concept:	<a href="#">Person (address)—health address line</a>
Value Domain:	<a href="#">Text X[X(179)]</a>

## Value domain attributes

## Representational attributes

Representation class:	Text
Data type:	String
Format:	X[X(179)]
Maximum character length:	180

## Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare
--------------------------	--

## Data element attributes

## Collection and usage attributes

**Guide for use:**

When addressing an Australian location, following are the standard address data elements that may be concatenated in the Address line:

- Building/complex sub-unit type
- Building/complex sub-unit number
- Building/property name
- Floor/level number
- Floor/level type
- House/property number
- Lot/section number
- Street name
- Street type code
- Street suffix code

One complete identification/description of a location/site of an address can comprise one or more than one instance of address line.

Instances of address lines are commonly identified in electronic information systems as Address-line 1, Address-line 2, etc.

The format of data collection is less important than consistent use of conventions in the recording of address data. Hence, address may be collected in an unstructured manner but should ideally be stored in a structured format.

Where Address line is collected as a stand-alone item, software may be used to parse the Address line details to separate the sub-components.

**Collection methods:**

Multiple Address lines may be recorded as required. The following concatenation rules should be observed when collecting address lines addressing an Australian location.

- Building/complex sub-unit type is to be collected in conjunction with Building/complex sub-unit number and vice versa.
- Floor/level type is to be collected in conjunction with Floor/level number and vice versa.
- Street name is to be used in conjunction with Street type code and Street suffix code.
- Street type code is to be used in conjunction with Street name and Street suffix code.
- Street suffix code is to be used in conjunction with Street name and Street type code.
- House/property number is to be used in conjunction with Street name.
