

Person (address)— house/property identifier, text X[X(11)]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	House/property number (person)
Synonymous names:	Australian street number
METEOR identifier:	270030
Registration status:	<ul style="list-style-type: none">• Community Services (retired), Superseded 06/02/2012• Health, Superseded 07/12/2011
Definition:	The identifier of a house or property where a person resides, as represented by text.
Data Element Concept:	Person (address)—house/property identifier

Value domain attributes

Representational attributes

Representation class:	Text
Data type:	String
Format:	X[X(11)]
Maximum character length:	12

Data element attributes

Collection and usage attributes

Guide for use:

Generally, only one house/property number is used. However, if the house/property number includes a number range, the range of applicable numbers should be included, separated by a hyphen (-), with no spaces between numerals, i.e. 17-19

- House/property number 1 - refers to physical House/property number and for ranges is the starting number (5 numeric characters)
- House/property number Suffix 1 - a single character identifying the House/property number suffix (1 alphanumeric character)
- House/property number 2 - refers to a physical House/property number and for ranges is the finishing number (5 numeric characters)
- House/property number suffix 2 - a single character identifying the House/property number suffix (1 alphanumeric character) with no space between the numeric and the alpha characters.

For example; '401A 403B'

'401' is House/property number first in range

'A' is the House/Property suffix 1

'403' is House/property number last in range

'B' is House/Property suffix 2
