Person—tobacco smoking status, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Tobacco smoking status
METEOR identifier:	270311
Registration status:	Health , Standard 01/03/2005 Indigenous , Standard 13/03/2015
Definition:	A person's current and past smoking behaviour, as represented by a code.
Context:	Public health and health care
Data Element Concept:	Person—tobacco smoking status
Value Domain:	Tobacco smoking status code N

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	
Permissible values:	Value	Meaning
	1	Daily smoker
	2	Weekly smoker
	3	Irregular smoker
	4	Ex-smoker
	5	Never smoked

Collection and usage attributes

Guide for use:	CODE 1	Daily smoker
	A person who smokes daily	
	CODE 2	Weekly smoker
	A person who smokes at least weekly but not daily	
	CODE 3	Irregular smoker
	A person who smokes less than weekly	
	CODE 4	Ex-smoker
	A person who does not smoke at all now, but has smoked at least 100 cigarettes or a similar amount of other tobacco products in his/her lifetime.	
	CODE 5	Never-smoker
	A person who does not smoke now and has smoked fewer than 100 cigarettes or similar amount of other tobacco products in his/her lifetime.	

Source and reference attributes

Reference documents: Standard Questions on the Use of Tobacco Among Adults (1998)

Data element attributes

Collection and usage attributes

Collection methods: The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults - interviewer administered (Questions 1 and 4) and self-administered (Questions 1 and 1a) versions. The questionnaires are designed to cover persons aged 18 years and over.

Comments: There are two other ways of categorising this information:

- Regular and irregular smokers where a regular smoker includes someone who is a daily smoker or a weekly smoker. 'Regular' smoker is the preferred category to be reported in prevalence estimates.
- Daily and occasional smokers where an occasional smoker includes someone who is a weekly or irregular smoker. The category of 'occasional' smoker can be used when the aim of the study is to draw contrast between daily smokers and other smokers.

Where this information is collected by survey and the sample permits, population estimates should be presented by sex and 5-year age groups. Summary statistics may need to be adjusted for age and other relevant variables.

Smoker type is used to define subpopulations of adults (age 18+ years) based on their smoking behaviour.

Smoking has long been known as a health risk factor. Population studies indicate a relationship between smoking and increased mortality/morbidity.

This data element can be used to estimate smoking prevalence. Other uses are:

- To evaluate health promotion and disease prevention programs (assessment of interventions)
- To monitor health risk factors and progress towards National Health Goals and Targets

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

Implementation in Data Set Specifications: [Aboriginal and Torres Strait Islander specific primary health care NBEDS December 2023](#)
[Indigenous](#), Standard 25/02/2024
Implementation start date: 01/07/2023
Implementation end date: 31/12/2023
Conditional obligation:

Reporting against this data element is conditional upon:

- [Person—age, total years N\[NN\]](#) being ≥ 11 years at the census date and a person having a 'CODE 1 Yes' response to '[Person—smoking status recorded indicator, yes/no code N](#)', OR

- a person having a 'CODE 2 Female' response to '[Person—sex, code X](#)', having given birth during the 12 months up to the census date and having a 'CODE 1 Yes' response to '[Person—smoking status recorded indicator, yes/no code N](#)'.

DSS specific information:

Data are provided to the AIHW twice:

1. relating to First Nations regular clients aged 11 years and over for smoking status results recorded within the previous 24 months (up to the census date). Data relating to only the most recently recorded result are provided to the AIHW. Where the smoking status does not have an assessment date assigned, it should be treated as being up to date (that is, as having been updated in the 24 months up to the census date).
2. relating to female First Nations regular clients who gave birth in the previous 12 months for smoking status results recorded during pregnancy (most recent result recorded prior to the completion of the latest pregnancy). Where the smoking status does not have an assessment date assigned, it should not be counted.

Data for CODE 1, CODE 2 and CODE 3 are combined into the category 'Current smoker'.
