Person—date of birth, DDMMYYYY

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Date of birth
Synonymous names:	Date of birth
METEOR identifier:	270391
Registration status:	<u>Community Services (retired)</u> , Superseded 25/08/2005 <u>Health</u> , Superseded 04/05/2005
Definition:	The date of birth of the person.
Data Element Concept:	Person-date of birth
Value Domain:	Date DDMMYYYY

Value domain attributes

Representational attributes

Representation class:	Date
Data type:	Date/Time
Format:	DDMMYYYY
Maximum character length:	8

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare

Data element attributes

Collection and usage attributes

Guide for use: If date of birth is not known or cannot be obtained, provision should be made to collect or estimate age. Collected or estimated age would usually be in years for adults, and to the nearest three months (or less) for children aged less than two years. Additionally, an estimated date flag should be reported in conjunction with all estimated dates of birth.

For data collections concerned with children's services, it is suggested that the estimated Date of birth of children aged under 2 years should be reported to the nearest 3 month period, i.e. 0101, 0104, 0107, 0110 of the estimated year of birth. For example, a child who is thought to be aged 18 months in October of one year would have his/her estimated date of birth reported as 0104 of the previous year. Again, an estimated date flag should be reported in conjunction with all estimated dates of birth.

Collection methods:	Information on date of birth can be collected using the one question:
	What is your/(the person's) date of birth?
	In self-reported data collections, it is recommended that the following response format is used:
	Date of birth://
	This enables easy conversion to the preferred representational layout (DDMMYYYY).
	Estimated dates of birth should be identified by an appropriate estimated date flag to prevent inappropriate use of date of birth data for record identification and/or the derivation of other metadata items that require accurate date of birth information.
Comments:	Privacy issues need to be taken into account in asking persons their date of birth.
	Wherever possible and wherever appropriate, date of birth should be used rather than age because the actual date of birth allows a more precise calculation of age.
	When date of birth is an estimated or default value, national health and community services collections typically use 0101 or 0107 or 3006 as the estimate or default for DDMM.
	It is suggested that different rules for reporting data may apply when estimating the Date of birth of children aged under 2 years because of the rapid growth and development of children within this age group which means that a child's development can vary considerably over the course of a year. Thus, more specific reporting of estimated age is suggested.
	NHDD specific:
	DSS-Health care client identification:
	Any new information collection systems should allow for 0000YYYY. (Refer to Standards Australia AS5017-2002 Health Care Client Identification).
