Definition:	A measure of the current status of additional nursing and personal care time required for residential aged care service residents resulting from certain behaviour (normally arising from the resident's mental state) such as disorientation, confusion, aggression, severe agitation or extreme anxiety, wandering and noisiness, and disruptive or self-destructive behaviour. Note that this is not intended to cover the routine or normal levels of social and emotional support.			
Context:	Residential aged care service statistics: along with functional profile, continence and specialised nursing procedures, behaviour constitutes one of the key indicators of dependency and disability for residential aged care service residents and serves to supplement Resident Classification Instrument level of dependency which is also in the dictionary.
