
Continence status (faeces) of residential aged care resident - at admission

Important note: This is an archived metadata standard from the AIHW Knowledgebase. For current metadata standards and related information please access METeOR, the AIHW's Metadata Online Registry at <http://meteor.aihw.gov.au>

Identifying and Definitional Attributes

Data Dictionary: NHDD
Knowledgebase ID: 000033 Version number: 2
Metadata type: DATA ELEMENT
Registration Authority: NHIMG Admin status: RETIRED
Effective date: 30-JUN-02
Definition: A measure of the level of incontinence (faeces) of a person at the time of admission to a residential aged care service in terms of the frequency with which the resident is incontinent.
Context: Residential aged care service statistics: along with continence, behaviour and specialised nursing procedures, functional profile constitutes one of the key indicators of dependency and disability for residential aged care service residents and serves to supplement the Resident Classification Instrument level of dependency.

Relational and Representational Attributes

Datatype: Alphanumeric
Representational form: CODE
Representation layout: A
Minimum Size: 1
Maximum Size: 1
Data Domain: A Continent
B Incontinent, but not daily
C Incontinent, occurring once daily
