
Type of service delivery setting

Important note: This is an archived metadata standard from the AIHW Knowledgebase. For current metadata standards and related information please access METeOR, the AIHW's Metadata Online Registry at <http://meteor.aihw.gov.au>

Identifying and Definitional Attributes

Data Dictionary:	NCSDD	
Knowledgebase ID:	000539	Version number: 1
Metadata type:	DATA ELEMENT	
Registration Authority:	NCSIMG	Admin status: SUPERSEDED
		Effective date: 01-JUL-98
Definition:	The type of physical setting in which a service(s) is actually provided to a client, irrespective of whether or not this is the same as the usual location of the service providing agency.	
Context:	This element is used, in conjunction with other data elements about service provision, to obtain a more detailed appraisal of service availability and how services are provided. At the broadest level, this data element should provide a measure of the extent to which services are provided to clients in their own homes, in community settings or centre-based facilities, residential care facilities or other settings. Categories used in individual community services data collections should be mappable to the community services settings classification in National Classifications of Community Services Version 1.0. To meet program or service-specific needs, the categories used in individual data collections may be more detailed than those in the community services settings classification, but they should always be mappable to categories in this classification. Where appropriate, revisions will be made to the community services settings classification.

Guide For Use: A client (an individual or family group) may receive more than one type of service within a single occasion of service.

Collection Methods: While there have been significant shifts in policy and practice (e.g. de-institutionalisation, increased emphasis on in-home support, attention to making services more responsive to peoples needs), to date there have been limited efforts to compare service provision/utilisation statistics and the settings in which these services have been provided/used. However, options within which of the service delivery setting classification might be applied to this purpose are under active consideration by NCSDC. These options include the introduction of a specific data item Type of service delivery setting or mapping charts of account line items to the classification.

Administrative Attributes

Source Document: National Classifications of Community Services, Version 1.0
Source Organisation: Australian Institute of Health and Welfare

Comments: Was ID. 000039 (500 added to avoid NHDD DE with same ID.).
