Identifying and Definitional Attributes

Data Dictionary:

Knowledgebase ID: 000462 Version number: 0

Metadata type: DATA ELEMENT

Registration ANZTC Admin status: DRAFT

Authority: Effective date: 07-APR-00

Definition: Count of all other sites that were involved in the telehealth session

while the site was connected to the session.

Context: Telehealth. Indicates the size of a multipoint connection.

Relational and Representational Attributes

Datatype: Numeric

Representational QUANTITATIVE VALUE

form:

Representation N(3)

layout:

Minimum Size: 1 Maximum Size: 3

Data Domain: NOVAL Count

Guide For Use: Recorded by each telehealth site for all other sites.

Note that there will be some anomalies in the number of sites recorded by each site due to sessions in which some participants

drop in and out of the session.

Administrative Attributes

Source Document:

Source Organisation: The Australian New Zealand Telehealth Committee

Comments: This data item enables description of the communication patterns

enabled by telehealth eg public hospital-community health centre,

regional centre-remote locality.

In addition to this and the other Telehealth data elements identifiable as having ANZTC as "Source Organisation", the

following

additional data elements are also associated with Telehealth:

- Area of usual residence,
- Date of birth,
- Sex,
- Geographical location of establishment,
- Person identifier, and
- Indigenous status.

Further details regarding Telehealth data definition and collection activity can be obtained from the Australian New Zealand Telehealth

Committee's web site at www.telehealth.org.au
