Participant count

Important note: This is an archived metadata standard from the AIHW Knowledgebase. For current metadata standards and related information please access METeOR, the AIHW's Metadata Online Registry at http://meteor.aihw.gov.au

Identifying and Definitional Attributes

Data Dictionary:

Knowledgebase ID: 000473 Version number: 0

Metadata type: DATA ELEMENT

Registration ANZTC Admin status: DRAFT

Authority: Effective date: 07-APR-00

Definition: Count of participants of each type involved in a telehealth session at

each site.

Context: Telehealth.

Relational and Representational Attributes

Datatype: Numeric

Representational QUANTITATIVE VALUE

form:

Representation N(2)

layout:

Minimum Size: 1 Maximum Size: 2

Data Domain: NOVAL Count

Guide For Use: Each site records the number of participants at their own site. The

count is cross-classified by participant type.

Related metadata: relates to the data element Participant type version 0

Administrative Attributes

Source Document:

Source Organisation: The Australian New Zealand Telehealth Committee

Comments: One of the advantages of telehealth is that it allows participation of

greater numbers of people in a consultation than might normally be the case eg specialist at one end and referring practitioner, client and maybe family member(s) at the other. This has implications

for funding.

In addition to this and the other Telehealth data elements

identifiable as having ANZTC as "Source Organisation", the following

additional data elements are also associated with Telehealth:

- Area of usual residence,
- Date of birth,
- Sex,
- Geographical location of establishment,
- Person identifier, and
- Indigenous status.

Further details regarding Telehealth data definition and collection activity can be obtained from the Australian New Zealand Telehealth

Committee's web site at www.telehealth.org.au
