Principal diagnosis

Important note: This is an archived metadata standard from the AIHW Knowledgebase. For current metadata standards and related information please access METeOR, the AIHW's Metadata Online Registry at http://meteor.aihw.gov.au

Identifying and Definitional Attributes

Data Dictionary: NHDD

Knowledgebase ID: 000136 Version number: 4

Metadata type: DATA ELEMENT

Registration NHIMG Admin status: SUPERSEDED

Authority: Effective date: 01-MAR-05

Definition: The diagnosis established after study to be chiefly responsible for

occasioning an episode of admitted patient care, an episode of residential care or an attendance at the health care establishment.

Context: Health services: the principal diagnosis is one of the most valuable

health data elements. It is used for epidemiological research, casemix

studies and planning purposes.

Admitted patients:

The principal diagnosis is a major determinant in the classification of Australian Refined Diagnosis Related Groups and Major Diagnostic

Categories.

Relational and Representational Attributes

Datatype: Alphanumeric

Representational CODE

form:

Representation ANN.NN

layout:

Minimum Size: Maximum Size: 6

Data Domain: NOVAL ICD-10-AM current edition.

Guide For Use: The principal diagnosis must be determined in accordance with

the Australian Coding Standards. Each episode of admitted patient care must have a principal diagnosis and may have additional diagnoses. The diagnosis can include a disease, condition, injury, poisoning, sign, symptom, abnormal finding, complaint, or other factor influencing health status. The first edition of ICD-10-AM, the Australian modification of ICD-10, was published by the National Centre for Classification in Health in 1998 and implemented from July 1998. The second edition was

published for use from July 2000 and the third edition for use from July 2002.

For the National Minimum Data Set for Community Mental Health Care and National Minimum Data Set for Residential Mental Health Care:

Codes can be used from ICD-10-AM or from The ICD-10-AM Mental Health Manual: An Integrated Classification and Diagnostic Tool for Community-Based Mental Health Services, published by the National Centre for Classification in Health in 2002.

Verification Rules: As a minimum requirement the Principal diagnosis code must be a valid code from the current edition of ICD-10-AM.

> For episodes of admitted patient care, some diagnosis codes are too imprecise or inappropriate to be acceptable as a principal diagnosis and will group to 951Z, 955Z and 956Z in the Australian Refined Diagnosis Related Groups, Version 4.

Diagnosis codes starting with a V, W, X or Y, describing the circumstances that cause an injury, rather than the nature of the injury, cannot be used as principal diagnosis. Diagnosis codes which are morphology codes cannot be used as principal diagnosis.

Collection Methods: A principal diagnosis should be recorded and coded upon separation, for each episode of patient care. The principal diagnosis is derived from and must be substantiated by clinical documentation.

> Admitted patients: where the principal diagnosis is recorded prior to discharge (as in the annual census of public psychiatric hospital patients), it is the current provisional principal diagnosis. Only use the admission diagnosis when no other diagnostic information is available. The current provisional diagnosis may be the same as the admission diagnosis.

Residents: The principal diagnosis should be recorded and coded upon the end of an episode of residential care (i.e. annually for continuing residential care).
