# Place of occurrence of external cause of injury

Important note: This is an archived metadata standard from the AIHW Knowledgebase. For current metadata standards and related information please access METeOR, the AIHW's Metadata Online Registry at <a href="http://meteor.aihw.gov.au">http://meteor.aihw.gov.au</a>

## Identifying and Definitional Attributes

Data Dictionary: NHDD

Knowledgebase ID: 000384 Version number: 5

Metadata type: DATA ELEMENT

Registration NHIMG Admin status: SUPERSEDED

Authority: Effective date: 03-JUN-04

Definition: The place where the external cause of injury, poisoning or adverse

effect occurred.

Context: Enables categorisation of injury and poisoning according to factors

important for injury control. Necessary for defining and monitoring injury control targets, injury costing and identifying cases for in-

depth research.

Sports and athletics area
 Street and highway
 Trade and service area

6 Industrial and construction area

7 Farm

8 Other specified places9 Unspecified place

Guide For Use: Admitted patients: Use the appropriate codes as fourth and fifth characters to Y92 when using the current edition of ICD-10-AM.

Used with all ICD-10-AM external cause codes V01 - Y89 and assigned according to the Australian Coding Standards.

Non-admitted patients: to be used for injury surveillance purposes for non-admitted patients when it is not possible to use ICD-10-AM codes. Select the code which best characterises the type of place where the person was situated when the injury occurred on the basis of the information available at the time it is recorded. If two or more categories are judged to be equally appropriate, select the one that comes first in the code list.

Verification Rules:Admitted patients: to be used with ICD-10-AM external cause codes V01 - Y89.
