Household ID

Identifying and Definitional Attributes

Data Dictionary: NHADD

Knowledgebase ID: 000680   Version number: 1

Metadata type: DATA ELEMENT

Registration Authority: NHDAMG   Admin status: SUPERSEDED

Effective date: 13-JUL-03

Definition: A unique identifier (within a state or territory) assigned to a household that is either seeking and/or receiving assistance.

Context: Households are one of the main counting units in housing assistance data and as such it is essential to be able to uniquely identify them.

Relational and Representational Attributes

Datatype: Numeric

Representational form:

Representation layout:

Minimum Size:

Maximum Size:

Data Domain: NOVAL   Each jurisdiction to devise

Collection Methods: Preferably agencies should allocate a unique identifier to a household when they apply for assistance, and this ID should then remain when/if they receive assistance. This enables the matching of waitlist data with assistance data.
A household for the purposes of the data element is the same as the members under a single tenancy agreement.

Comments: The coding and order of States/Territories is different for the National Health Data Dictionary and the Data Standardisation Project because the Data Standardisation Project uses the order used in the CSHA Performance Indicator manuals. This order used in the Data Standardisation Project is different from that used in the ABS Census 1996 Data Dictionary, in which SA and WA are reversed. (See State/territory identifier.)
