Killip classification code N

Identifying and definitional attributes

Metadata item type:	Value Domain
METEOR identifier:	285149
Registration status:	Health , Standard 04/06/2004
Definition:	A code set representing the Killip class, as a measure of haemodynamic compromise.

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N
Maximum character length:	1

	Value	Meaning
Permissible values:	1	Class 1
	2	Class 2
	3	Class 3
	4	Class 4
Supplementary values:	8	Other
	9	Not stated/inadequately described

Collection and usage attributes

Guide for use: Rales or crepitations represent evidence of pulmonary interstitial oedema on lung auscultation and an S₃ is an audible extra heart sound by cardiac auscultation.

CODE 1 Class 1

Absence of crepitations/rales over the lung fields and absence of S₃.

CODE 2 Class 2

Crepitations/rales over 50% or less of the lung fields or the presence of an S₃.

CODE 3 Class 3

Crepitations/rales over more than 50% of the lung fields.

CODE 4 Class 4

Cardiogenic Shock. Clinical criteria for cardiogenic shock are hypotension (a systolic blood pressure of less than 90 mmHg for at least 30 minutes or the need for supportive measures to maintain a systolic blood pressure of greater than or equal to 90 mmHg), end-organ hypoperfusion (cool extremities or a urine output of less than 30 ml/h, and a heart rate of greater than or equal to 60 beats per minute). The haemodynamic criteria are a cardiac index of no more than 2.2 l/min per square meter of body-surface area and a pulmonary-capillary wedge pressure of at least 15 mmHg.
