Person—date of birth, DDMMYYYY

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Date of birth
METEOR identifier:	287007
Registration status:	Aged Care , Standard 30/06/2023 Australian Institute of Health and Welfare , Recorded 09/08/2023 Australian Teacher Workforce Data Oversight Board , Standard 30/08/2022 Children and Families , Standard 22/11/2016 Commonwealth Department of Health , Retired 19/08/2023 Community Services (retired) , Standard 25/08/2005 Disability , Standard 07/10/2014 Early Childhood , Standard 21/05/2010 Health , Standard 04/05/2005 Homelessness , Standard 23/08/2010 Housing assistance , Standard 20/06/2005 Independent Hospital Pricing Authority , Standard 01/11/2012 Indigenous , Standard 11/08/2014 National Health Performance Authority (retired) , Retired 01/07/2016 Tasmanian Health , Standard 31/08/2016 WA Health , Standard 19/03/2015 Youth Justice , Standard 15/02/2022
Definition:	The date of birth of the person, expressed as DDMMYYYY.
Data Element Concept:	Person—date of birth
Value Domain:	Date DDMMYYYY

Value domain attributes

Representational attributes

Representation class:	Date
Data type:	Date/Time
Format:	DDMMYYYY
Maximum character length:	8

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare
---------------------------------	--

Data element attributes

Collection and usage attributes

Guide for use: If date of birth is not known or cannot be obtained, provision should be made to collect or estimate age. Collected or estimated age would usually be in years for adults, and to the nearest three months (or less) for children aged less than two years. Additionally, an estimated date flag or a date accuracy indicator should be reported in conjunction with all estimated dates of birth.

For data collections concerned with children's services, it is suggested that the estimated date of birth of children aged under 2 years should be reported to the nearest 3 month period, i.e. 0101, 0104, 0107, 0110 of the estimated year of birth. For example, a child who is thought to be aged 18 months in October of one year would have his/her estimated date of birth reported as 0104 of the previous year. Again, an estimated date flag or date accuracy indicator should be reported in conjunction with all estimated dates of birth.

Collection methods: Information on date of birth can be collected using the one question:

What is your/(the person's) date of birth?

In self-reported data collections, it is recommended that the following response format is used:

Date of birth: __ / __ / ____

This enables easy conversion to the preferred representational layout (DDMMYYYY).

For record identification and/or the derivation of other metadata items that require accurate date of birth information, estimated dates of birth should be identified by a date accuracy indicator to prevent inappropriate use of date of birth data. The linking of client records from diverse sources, the sharing of patient data, and data analysis for research and planning all rely heavily on the accuracy and integrity of the collected data. In order to maintain data integrity and the greatest possible accuracy an indication of the accuracy of the date collected is critical. The collection of an indicator of the accuracy of the date may be essential in confirming or refuting the positive identification of a person. For this reason it is strongly recommended that the data element Date—accuracy indicator, code AAA also be recorded at the time of record creation to flag the accuracy of the data.

Comments: Privacy issues need to be taken into account in asking persons their date of birth.

Wherever possible and wherever appropriate, date of birth should be used rather than age because the actual date of birth allows a more precise calculation of age.

When date of birth is an estimated or default value, national health and community services collections typically use 0101 or 0107 or 3006 as the estimate or default for DDMM.

It is suggested that different rules for reporting data may apply when estimating the date of birth of children aged under 2 years because of the rapid growth and development of children within this age group which means that a child's development can vary considerably over the course of a year. Thus, more specific reporting of estimated age is suggested.

[Indigenous](#), Standard 08/10/2014

Implementation start date: 01/10/2011

[Commonwealth State/Territory Disability Agreement NMDS - 1 July 2006](#)

[Community Services \(retired\)](#), Superseded 14/12/2008

DSS specific information:

In the CSTDA collection, if the age of the person is known, the age of the person should be used to derive the person's year of birth. If the person's age is not known, an estimate of the person's age should be used to calculate an estimated year of birth. An actual or estimated year of birth should then be converted to an estimated date of birth according to the following convention: 01/01/estimated year of birth. Where the date of birth is estimated, this should be indicated when the data is submitted using the date estimate indicator.

It is important that service type outlets do not record estimated dates of birth by using '00' for the day, month or year as this would not be considered a valid date by the system processing the data.

[Commonwealth State/Territory Disability Agreement NMDs \(July 2008\)](#)

[Community Services \(retired\)](#), Superseded 11/11/2009

DSS specific information:

[Disability Services NMDS 2009-10](#)

[Community Services \(retired\)](#), Superseded 15/12/2011

Implementation start date: 01/07/2009

DSS specific information:

In the NDA collection, if the age of the person is known, the age of the person should be used to derive the person's year of birth. If the person's age is not known, an estimate of the person's age should be used to calculate an estimated year of birth. An actual or estimated year of birth should then be converted to an estimated date of birth according to the following convention: 01/01/estimated year of birth. Where the date of birth is estimated, this should be indicated when the data is submitted using the date estimate indicator.

It is important that service type outlets do not record estimated dates of birth by using '00' for the day, month or year as this would not be considered a valid date by the system processing the data.

[Commonwealth Department of Health](#), Retired 19/10/2023
Implementation start date: 01/07/2013
Implementation end date: 30/06/2014
DSS specific information:

Variable name = PAT_DOB

In the context of PBS data, this data element describes the date of birth of the patient and is referred to within the PBS system as 'Patient date of birth'.

'Patient date of birth' is extracted from the Medicare record of the patient, as reported to the Department of Human Services (DHS).

This data element can be used to identify individual patients and may, in some use cases, need to be suppressed or perturbed.

[Safety in care \(SC\) file cluster](#)

[Children and Families](#), Superseded 03/11/2021

DSS specific information:

This collection requires a non-standard format for this data item: DD/MM/YYYY.

For children who were unborn at the time of the notification, estimated age can be calculated (e.g. – 1 month if due to be born in one month) from which an estimated date of birth (DOB) can be determined.

For children who were unborn at the time of the notification and who were subsequently born by 31 August, date of birth should be updated where possible.

When an estimate is required, all known fields should be entered (e.g. if only year is known use 01/01/YYYY, if year and month are known use 01/MM/YYYY).

If the date is not known and cannot be estimated, record as 01/01/1900.

If it is not applicable to record a date (i.e. the child has not been born by 31 August), record as 01/01/9999.
