Episode of admitted patient care—length of stay (including leave days) (antenatal), total N[NN]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Length of stay (including leave days) (antenatal)
METEOR identifier:	290577
Registration status:	Health, Standard 04/07/2007
Definition:	The length of stay (LOS) of a woman before the birth of her baby, including leave days, measured in days.
Context:	Perinatal
Data Element Concept:	Episode of admitted patient care—length of stay (including leave days)
Value Domain:	Total days N[NN]

Value domain attributes

Representational attributes

Representation class:	Total
Data type:	Number
Format:	N[NN]
Maximum character length:	3
Unit of measure:	Day

Data element attributes

Collection and usage attributes

•		
Guide for use:	Formula:	
	LOS (antenatal) = baby's date of birth - mother's admission date	
	Antenatal LOS is calculated by subtracting the mother's admission date from the baby's date of birth. It includes contract days and leave days.	
	If the mother's admission date and the baby's date of birth are on the same date, count the LOS as 1 day.	
	Antenatal length of stay refers only to the admission associated with the birth.	
	Antenatal LOS relates only to the episode of admitted patient care associated with the birth.	
	In a multiple pregnancy, the date of birth of the first baby born should be used to calculate the mother's antenatal LOS.	
	To calculate the total LOS, use the data element - Episode of admitted patient care - length of stay (including leave days) total.
