Dwelling—utility status (electricity supply)

Identifying and definitional attributes

Metadata item type:	Data Element Concept
METEOR identifier:	292958
Registration status:	Housing assistance , Retired 01/05/2016
Definition:	Whether electricity is supplied to a dwelling.
Context:	Housing stock condition

Object Class attributes

Identifying and definitional attributes

Object class:	Dwelling
Definition:	A structure or a discrete space within a structure intended for people to live in or where a person or group of people live. Thus a structure that people actually live in is a dwelling regardless of its intended purpose, but a vacant structure is only a dwelling if intended for human residence. A dwelling may include one or more rooms used as an office or workshop provided the dwelling is in residential use.
Context:	Dwellings are the main counting unit in the housing sector. Dwellings are reported for a variety of purposes including number of untenable or tenable, and occupied or vacant dwellings. Dwellings may be owned and/or, managed, and/or available for a use by a specific program, including head-leased stock from private and government sources. A dwelling includes a boarding house building and boarding house units .
Specialisation of:	Environmental factors

Collection and usage attributes

Guide for use:	Boarding house rooms or beds are not identified as separate dwellings unless they are self-contained. Self-contained rooms are therefore defined as units and are counted as a separate dwelling. For the public rental housing and state owned and managed Indigenous housing data collections, the number of tenancy (rental) units is used as a proxy for counting the number of dwellings.
