Person—location of impairment of body structure, code (ICF 2001) N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Location of impairment
METEOR identifier:	320177
Registration status:	Community Services (retired) , Standard 16/10/2006 Disability , Standard 13/08/2015 Health , Standard 29/11/2006
Definition:	The location of a person's impairment in a specified body structure, as represented by a code.
Context:	Human functioning and disability
Data Element Concept:	Person—location of impairment of body structure
Value Domain:	Impairment location code (ICF 2001) N

Value domain attributes

Representational attributes

Classification scheme:	International Classification of Functioning, Disability and Health 2001	
Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	

	Value	Meaning
Permissible values:	0	More than one region
	1	Right
	2	Left
	3	Both sides
	4	Front
	5	Back
	6	Proximal
Supplementary values:	7	Distal
	8	Not specified
	9	Not applicable

Collection and usage attributes

Guide for use:

This metadata item contributes to the definition of the concept '[Disability](#)' and gives an indication of the experience of disability for a person.

Impairments of body structure are problems in body structure such as a loss or significant departure from population standards or averages.

Use only one code. Select the one that best describes the situation with this structure. Combinations are not possible.

CODE 0 More than one region (except both sides)

Used when the impairment is present in more than one body location (but not bilaterally see code 3); for example when burn scars affect many areas of skin.

CODE 1 Right

Used when the impairment is present to the right of the midline of the person's body.

CODE 2 Left

Used when the impairment is present to the left of the midline of the person's body.

CODE 3 Both sides (bilateral)

Used when the impairment is two-sided and disposed on opposite sides of the midline axis of the body, for example bilateral joint deformities.

CODE 4 Front

Used when the impairment is present in front of a line passing through the midline of the body when viewed from the side.

CODE 5 Back

Used when the impairment is present behind a line passing through the midline of the body when viewed from the side.

CODE 6 Proximal

Used when the impairment is situated towards the point of origin or attachment, as of a limb or bone (opposed to distal), for example the end of the structure that is closer to the centre of the body.

CODE 7 Distal

Used when the impairment is situated away from the point of origin or attachment, as of a limb or bone (opposed to proximal), for example the end of structure that is further away from the centre of the body.

CODE 8 Not specified

Used when there is an impairment of body structure but the location of the impairment is not recorded.

CODE 9 Not applicable

Used when it is not appropriate to code the location of an impairment of body structure.

Data element attributes

Collection and usage attributes

Guide for use: This data element is to be used in conjunction with specified body structures, for example, 'impairment of proximal structures related to movement'. This data element may also be used in conjunction with Person—extent of impairment of body structure, code (ICF 2001) N and Person—nature of impairment of body structure, code (ICF 2001).
