## Environmental factor code (ICF 2001) AN[NNN]

## Identifying and definitional attributes

| Metadata item type:  | Value Domain   |
|----------------------|--|
| Synonymous names:    | Environmental factor   |
| METEOR identifier:   | 321693   |
| Registration status: | <u>Community Services (retired)</u> , Standard 16/10/2006<br><u>Disability,</u> Standard 13/08/2015<br><u>Health</u> , Standard 29/11/2006               |
| Definition:          | A code set representing the <i>Environmental Factors</i> component of the International Classification of Functioning, Disability and Health (ICF 2001). |
| Context:             | The environment in which a person functions or experiences disability  |

## **Representational attributes**

| Representation class:     | Code    |
|---------------------------|---------|
| Data type:                | String  |
| Format:                   | AN[NNN] |
| Maximum character length: | 5       |

## Collection and usage attributes

This metadata item contributes to the definition of the concept 'Disability' and gives an indication of the experience of disability for a person.

Environmental factors represent the circumstances in which the individual lives. These factors are conceived as immediate (e.g. physical features of the environment, social environment) and societal (formal and informal social structures, services and systems). Different environments may have a very different impact on the same individual with a given health condition.

Facilitators are features of the environment that have a positive effect on **disability**. Barriers are features of the environment that have a negative effect on disability.

Data can be collected at the three digit level in one chapter and at the chapter level in another. However it is only possible to collect data at a single level of the hierarchy in a single chapter to maintain mutual exclusivity. For example, it is not permitted to collect both 'Attitudes' (chapter level) and 'Social, norms, practices and ideology' (3 digit level) as the former includes the latter.

The value domain below refers to the highest hierarchical level (ICF chapter level). Data collected at this level, in association with *Extent of environmental factor influence code [X]N* will use the codes as indicated. The full range of the permissible values together with definitions can be found in the *Environmental Factors* component of the ICF.

CODE e1 Products and technology
CODE e2 Natural environment and human-made changes to environment
CODE e3 Support and relationships
CODE e4 Attitudes
CODE e5 Services, systems and policies

Data collected at this level will provide a general description of the environmental factors and can only be compared with data collected at the same level.

An example of a value domain at the 3 digit level from the Environmental factors component may include:

CODE e225ClimateCODE e240LightCODE e250SoundCODE e255VibrationCODE e260Air quality

An example of a value domain at the 4 digit level from the environmental factors component may include:

CODE e1151Assistive products and technology for personal use in daily lifeCODE e1201Assistive products and technology for personal indoor and outdoormobility and transportationCODE e2151CODE e1301Assistive products and technology for communicationCODE e1301Assistive products and technology for educationCODE e1351Assistive products and technology for employmentCODE e1401Assistive products and technology for culture, recreation and sportCODE e1451Assistive products and technology for the practice of religion andspiritualityFor the practice of religion and

The prefix e denotes the domains within the component of Environmental Factors.
