

Body functions

Identifying and definitional attributes

Metadata item type:	Glossary Item
METEOR identifier:	327294
Registration status:	<ul style="list-style-type: none">• Community Services (retired), Standard 16/10/2006• Disability, Standard 13/08/2015• Health, Standard 29/11/2006
Definition:	Body functions are the physiological functions of body systems (including psychological functions).

Collection and usage attributes

Guide for use:	Body functions are organised according to body systems. The term 'body' refers to the human organism as a whole and includes mental or psychological functions. Body functions are classified in neutral terms. To indicate that there is a problem with a body function requires the use of the impairment extent code to denote the extent or magnitude of the problem together with the body functions code.
Comments:	<p>This glossary item is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).</p> <p>The ICF provides a framework for the description of human functioning and disability. The components of the ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as Episode of care principal diagnosis, code (ICD-10-AM 3rd ed) ANN{.N[N]} and Episode of care additional diagnosis, code (ICD-10-AM 3rd ed) ANN{.N[N]}.</p>
