Person with acute coronary syndrome—underlying cause of acute coronary syndrome, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Other/Underlying cause of acute coronary syndrome
Synonymous names:	Secondary cause of ACS
METEOR identifier:	338310
Registration status:	Health, Standard 01/10/2008
Definition:	The condition or event, other than the usual risk factors, which has caused a person's acute coronary syndrome symptoms, as represented by a code
Data Element Concept:	Person—underlying cause of acute coronary syndrome
Value Domain:	Underlying cause of acute coronary syndrome code N

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N[N]	
Maximum character length:	9	
	Value	**Meaning**
Permissible values:	1	Anaemia
	2	Severe valvular disease
	3	Thyrotoxicosis
	4	Fever
	5	Hypoxaemia
	6	Trauma
	7	Surgery
Supplementary values:	88	Other
	99	Not stated/inadequately described

Data element attributes

Collection and usage attributes

Collection methods:	This is to be recorded by the clinician.
Comments:	This identifies whether the person experiencing acute coronary syndrome (ACS) symptoms is doing so due to another condition or event and where the treatment would be primarily targeted at managing that condition. The presence of one of these conditions or events has a significant impact on the appropriate treatment modalities for ACS. Therefore, the person's treatment may be different from those recommended for ACS.
